About the Cause

Multiple Sclerosis or "MS" is a chronic disorder of the central nervous system affecting over 400,000 people in the US and two million individuals worldwide. MS often results in severe disability including the inability to walk, impaired vision or in some cases blindness, cognitive dysfunction, and other serious symptoms. Unfortunately, no one knows what causes it, there is no known cure, and treatments are modest at best.

The Accelerated Cure Project for Multiple Sclerosis is a national nonprofit organization dedicated to curing MS by determining its causes. For more details visit www.acceleratedcure.org
